

Task 2 – ADR Reporting & Documentation

Pharmacovigilance Internship Submission

1. Patient Details

Patient:	Ramesh Patel
Age / Sex:	32 years / Male
Weight:	65 kg
Diagnosis:	Acute bacterial sinusitis
Medical History:	No known history of allergies, diabetes, or hypertension

2. Suspected Drug

Drug:	Amoxicillin
Dose:	500 mg
Route:	Oral
Frequency:	Three times a day
Start Date:	March 1, 2026
Indication:	Acute bacterial sinusitis

3. Adverse Reaction

Reaction:	Generalized itching and skin rashes on the chest
Date of Onset:	March 3, 2026
Time to Onset:	2 days after starting amoxicillin

4. Concomitant Medicines

No concomitant medicines reported in the provided case scenario.

5. Management

Action Taken:	Amoxicillin was stopped immediately on March 3, 2026
Treatment:	Antihistamines were administered

6. Outcome

Outcome:	Full recovery
Recovery Date:	March 6, 2026

7. Reporter Information

Not provided in the case scenario.

8. Brief Assessment

The patient developed generalized itching and skin rashes on the chest two days after starting amoxicillin. The suspected drug was stopped immediately and antihistamines were administered. The patient subsequently made a full recovery by March 6, 2026. The case has been documented using the available patient, medication, reaction, management, and outcome information.
